

b) a nasal interface adapted to be worn by the user of the system, said nasal interface selected from the group consisting of a nose mask, a face mask, a T-joint and a wishbone;

c) a scent generator for generating scent-laden air, said generator housed in said case; and

d) a conduit connecting said scent generator to said nasal interface.

16. The system of claim 15 wherein said scent generator comprises:

one or more fragrance containers for releasing scent in a stream of air;

a means for creating said stream of air and moving scent-laden air to said nasal interface; and

a mixing bed for creating a mixture of scent-laden air.

17. The system of claim 16 wherein said means for creating said stream of air is a fan and an electrical source.

18. The system of claim 15 further comprising an exhaust conduit having two open ends, one of said open ends connected to said nasal interface and the other of said open ends connected to a scent scrubber to remove the scent from the air from said nasal

interface and from the system, said
